**FOR HEALTHCARE**

# YOUR #1 SOURCE FOR HEALTHCARE WIRELESS TEMPERATURE MONITORING

There is a growing demand for Wireless temperature monitoring in the Healthcare industry especially related to patient safety and industry compliance. **TempVision™** will reduce the need for staff involvement in the tracking and reporting of this critical information and allow them to spend more time with their patients.

**TempVision™** offers 24/7 remote temperature, humidity, door open/close.

From -22°F to 140°F / -30°C to 60°C, the system allows monitoring of an unlimited number of points in an unlimited number of buildings with just one piece of software! When looking for a proven wireless system, Healthcare Facilities turn to **TempVision™**.

The system wirelessly transmits real-time data to the **TempVision™** server, which can be viewed on any web enabled device from an on-site or remote PC, Tablet, or Smart Phone and provides instantaneous alerts and reports for trend analysis, historical data files and documentation of corrective actions.

When Healthcare Facilities seek an enterprise-wide solution for wireless temperature monitoring, they turn to **TempVision™** by MJST.

The **TempVision™** Wireless Monitoring System eliminates the time and expense of manual temperature collecting. The system can provide years of history and can store data indefinitely, or purge on a rolling basis.

**TempVision™** is most commonly used for monitoring storage temperatures of medication, food and blood. **TempVision™** eliminates the need for manual equipment monitoring and provides highly accurate data for pharmacy, laboratory, dietary and nursing facilities..

## MONITORING SYSTEM

**TempVision™** transmitters (sensors) are battery powered and require no hard-wired connectivity. Transmitters are easily mounted in any location and transmit wirelessly to the **TempVision™** software that collects and records data 24/7.

**TempVision™** can be accessed and viewed from any web enabled device such as PC's, tablets or smart phones, based on your authorized log in credentials. Each transmitter (sensor) monitors against preset conditions that are defined by the user and can provide alerts by a variety of methods such as: text message, email.

**TempVision™** software creates reports for any hospital department via information collected through the system, and also provides documentation of corrective actions.

## PHARMACY

**TempVision™** will assist in proper storage of medication which is critical to patient safety as well as FDA compliance. **TempVision™** robust tools will provide real-time alerts along with detailed reporting for managing and compliance. TempVision also helps customers with 797 compliance.

## NURSING

**TempVision™** will automate a traditionally manual process of checking temperatures in refrigeration units, blanket warmers and many other types of hospital equipment. **TempVision™** allows the staff to focus on their primary purpose- the patient..

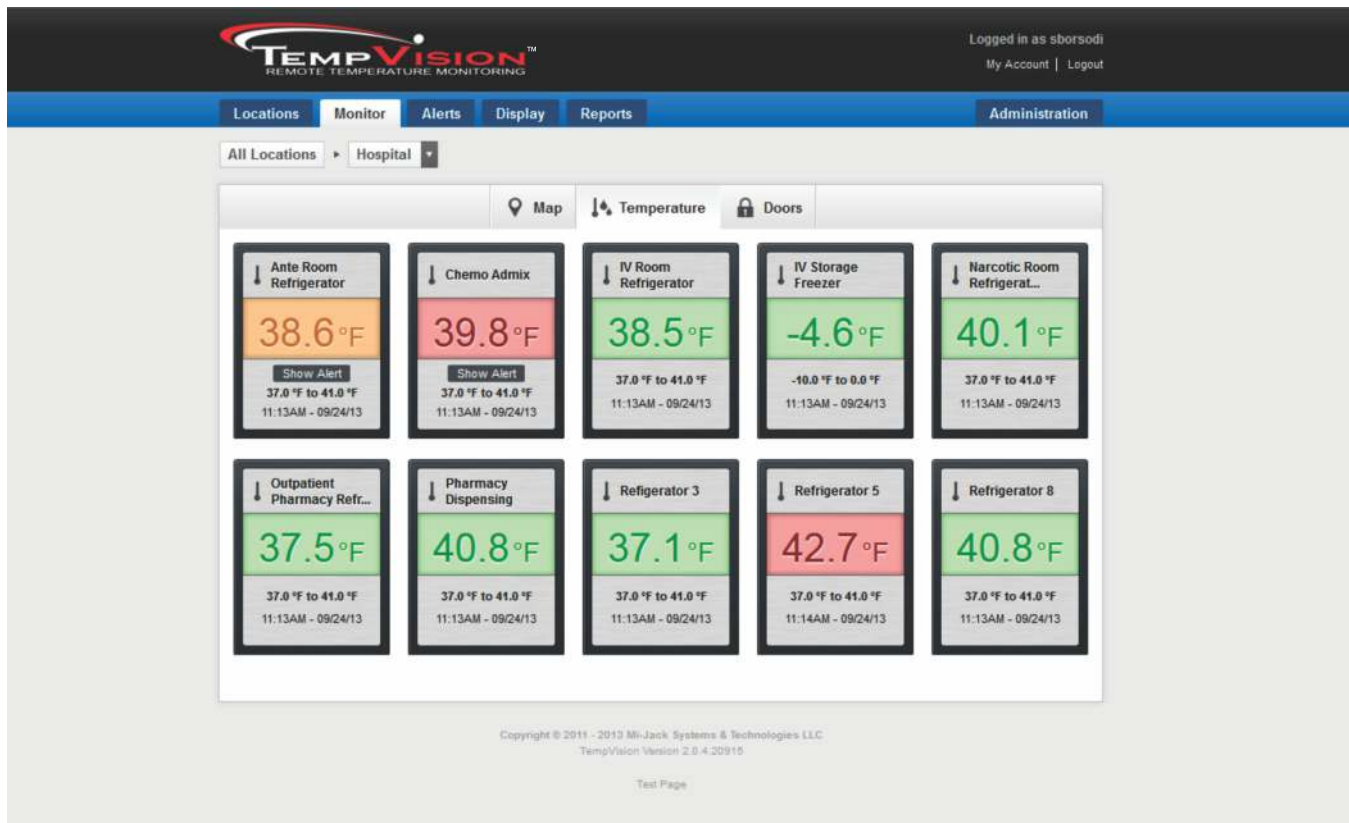

## FACILITIES

Hospitals are large facilities and the labor of checking a variety of locations can be overwhelming. **TempVision™** will allow your staff to be most productive by sending out of range alerts directly to the maintenance staff avoiding unnecessary work orders and loss of valuable production time. **TempVision™** will also monitor other vital areas such as laboratories, blood banks and dietary.

Transmitter (sensor) information is recorded and time-stamped not allowing to be altered. Temperature data can be displayed in either Fahrenheit or Celsius.

## MULTI-POINT WIRELESS TEMPERATURE MONITORING

**TempVision™** from MJST is a complete temperature monitoring system that allows healthcare providers to remotely monitor temperatures from multiple locations to ensure optimum efficiency, safety, and compliance.

**TempVision™** gives management the flexibility to monitor multiple data points within a facility, from coolers/freezers, reach-in refrigerators/freezers, and hot/cold holding units. When an event is detected, alerts are instantly generated and sent via email and text message to appropriate personnel.

## SOFTWARE

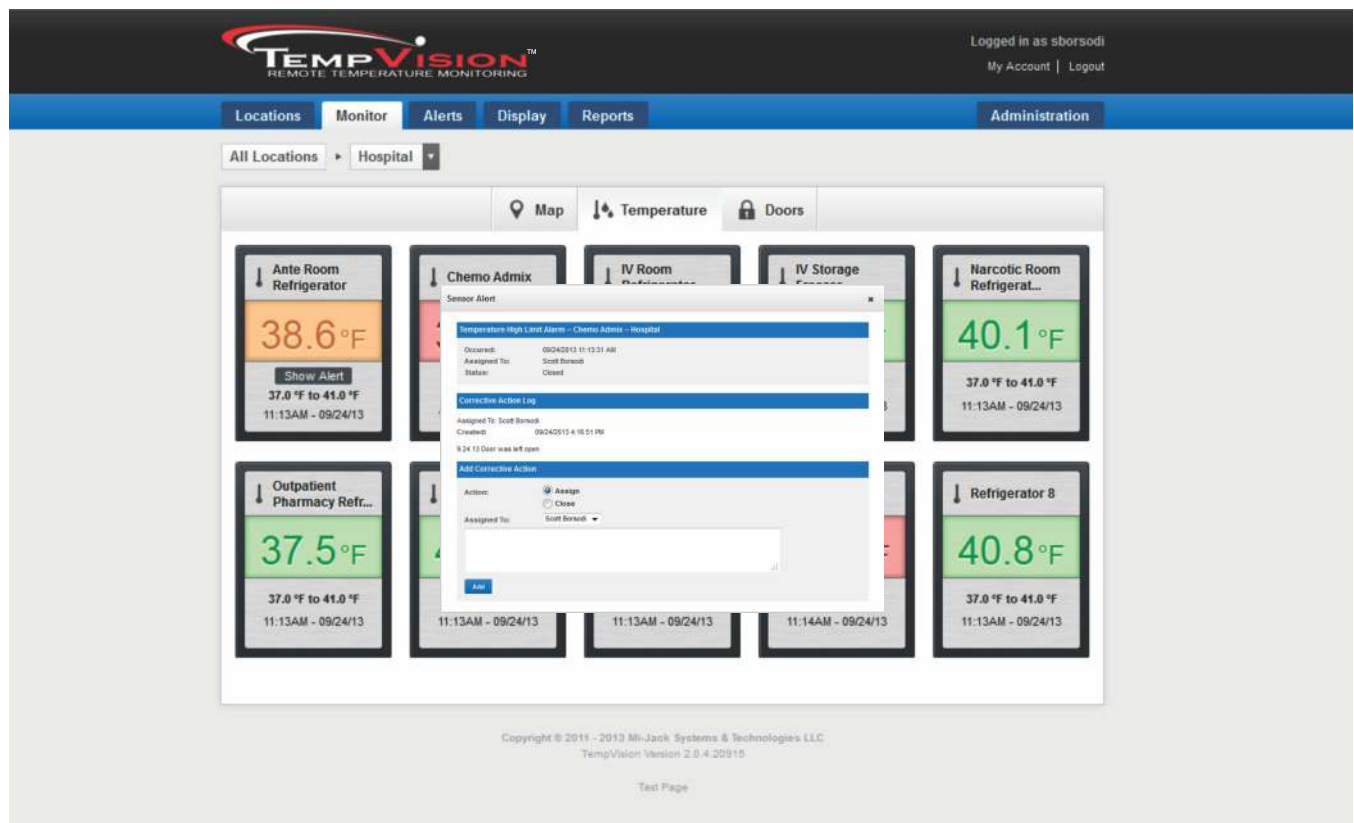

- Allows the user to store as much data as necessary, with automatic back-ups
- Real-time temperature readings
- Graph single or multiple temperatures or transmitters over a defined period of time
- Hourly performance reports
- Monthly and yearly equipment performance reports
- Define user views to specific groups of transmitters (sensors) to control user access
- Perform cooling validations to ensure procedures and processes are in compliance
- Audit tracking log – tracking every system log-on and corrective action

## SYSTEM ALERTS

Alerts may be configured by time of day or day of the week. Complete tracking of all corrective actions by time, user and action. An operator must "acknowledge" and can record any corrective actions taken to resolve the issue(s). The time and person acknowledging the alarm is recorded and stored with the alarm event in the database. When a **TempVision™** transmitter (sensor) identifies a monitoring point has exceeded a pre-set range, it sends an alert notification via a variety of methods including:

E-mails

Text Messages

## MI-CARE SUPPORT PROGRAM

We know how important both after-sale and ongoing factory support is to the successful implementation of a complete temperature monitoring program. That is why we utilize only our own staff to install, train and support all of our customers and we offer a variety of support packages that cover the following:

- On-Site Services
- Performance Review
- Training
- Technical audits Remote
- System Review Extended
- Hardware Warranties

With Software as a Service (SaaS) there are no management fees. You are always on the latest release. It is the goal of MJST to provide superior Help Desk support, and the MJST Support Program has been developed to provide the highest level of customer service and most current version

Customer Support is available:  
Monday - Friday 8am-5pm CST  
Phone: 877-473-2367
